

○ LONGEVITY ENVIRONMENT AT HOME ○

5Lifetech & 7Lifetech

Engineered by **oxyhelp**。

Two systems build around one principle:
The body's most important environment should be the one you live in every day.

12+ years

of hyperbaric engineering
development behind the platform

3.000+

installed chambers globally across
the wider OxyHelp Ecosystem

An Entire Eco-system

that merges load, oxygen, circulation
and recovery in one place

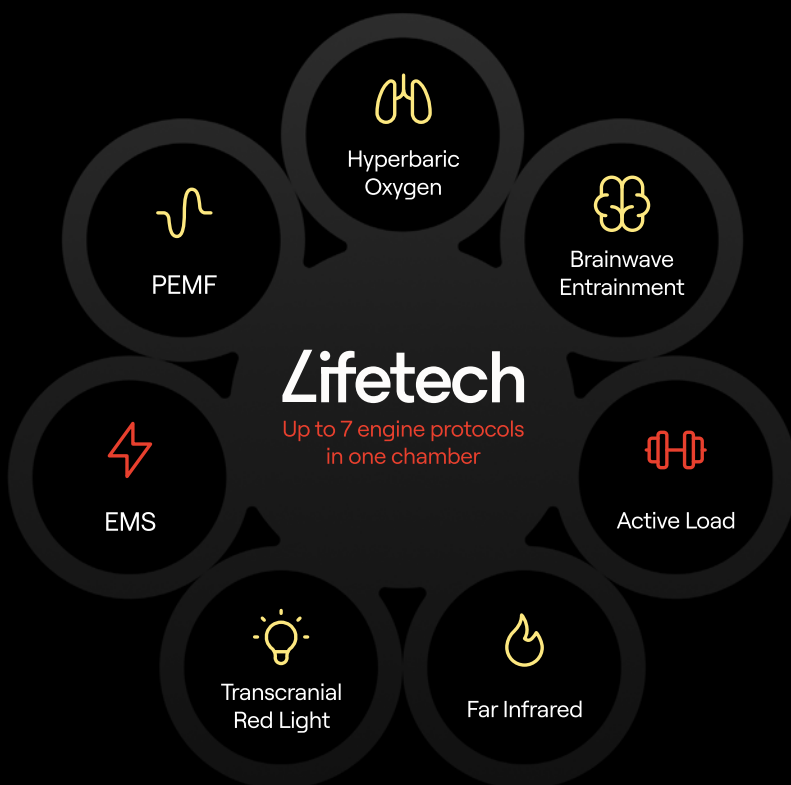

**You don't need more time.
You need a better way to use it.**

Recovery works best in one place

Recovery works when therapies are combined in the right order, while the body can still benefit from each one. Spread them across the week, and much of that effect is lost. You can drive across town for hyperbaric oxygen on Tuesday, red light on Thursday, PEMF on Saturday, and infrared on Sunday and still get less than from one well-sequenced session.

The harder problem is time

The people who would benefit most from integrated recovery have the least of it. A three-hour protocol across five rooms is something you do twice and then never again.

What is an engine?

An engine is one of the seven mechanisms the body uses to take oxygen in, move it, deliver it and burn it, each one with its own switch, and each one idle unless something turns it on.

5LifeTech and 7LifeTech compress the entire stack into one room in your home. Designed to be used the day you receive it, and every week for the next ten years.

One covers **recovery**. The other covers **everything**.

Engineered by **oxyhelp**°

They differ in how many of the body's seven oxygen-utilisation engines they activate, and in whether the session is built around stillness or movement.

5Lifetech

Recovery Protocols

Five integrated therapy protocols built into a comfortable zero gravity recliner. Hyperbaric oxygen, transcranial red light, PEMF, far-infrared warmth, and brainwave entrainment. Sequenced into a single forty-to-ninety-minute session.

- 01 Breathe
- 02 Push
- 03 Pump
- 04 Open
- 05 Cross
- 06 Burn
- 07 Flush

THERAPY	5
STRESS ENGINES	0
SESSION	40-90 min
FORM FACTOR	C1 / C3 / C4 / C5

7Lifetech

Recovery Protocols + Stress Zone

All seven engines, fully activated. Adds active load under pressure - rowing, EMS, dumbbells - which opens 80-90% of capillaries against 20-30% at rest.

- 01 Breathe
- 02 Push
- 03 Pump
- 04 Open
- 05 Cross
- 06 Burn
- 07 Flush

Rowing **01** Cardio

Dumbbells **02** Strength under pressure

EMS **03** Neuromuscular activation

THE RECLINER

Recover

Red Light **04** Cellular recovery

PEMF **05** Tissue-level repair

Far Infrared **06** Deep penetrating heat

Brainwave entrainment **07**
Shift into recovery

Two different protocols, running in parallel.

Each seat runs its own protocol, at the same time.
Nobody waits, nobody compromises.

One person recovers
while the other performs.

Zifetech

One Session. **55 Minutes.**

0:00
to
0:15

ENTRY & PRESSURISATION

**The chamber seals.
The world stops.**

Pressure rises smoothly. The world outside falls below 45 dB begins to load - bypassing the limits of the red blood cell.

0:15
to
0:40

MOVEMENT & OXYGEN PEAK

**Push, Pump & Open
activate together**

Rowing, EMS and dumbbells under pressure open 80-90% of capillaries. With oxygen nearly doubled, you push harder without hitting the breathless wall.

0:40
to
0:55

RECOVERY & CONSOLIDATION

**Cross, Burn,
Flush sequence**

Transcranial red light reaches the brain at 810 nm. PEM and far infrared close down through tissue. Brainwave entrainment moves the nervous system from beta into alpha, theta, delta.

min

EXIT & START YOUR DAY

**Enjoy your day
with more energy**

Pressure releases on a controlled curve. You step out into the next twelve hours of your day - the ones the session was designed to give back.

They **crash** at 14:00. You don't.

Most people don't crash because of one bad hour. They crash because the day was never supplied. Here is yours, hour by hour, against theirs.

Two systems. One home.

Same chamber, two configurations. One is built around recovery for the whole house. The other adds the engines for a body that trains. Here is how to tell which one is yours.

5LifeTech

Recovery, sleep and longevity. The foundation that fits every body in the house.

RECOMMENDED FOR **RECOVERY**

The parent with long days

A body that is healing The older relative

The partner who doesn't train

7LifeTech

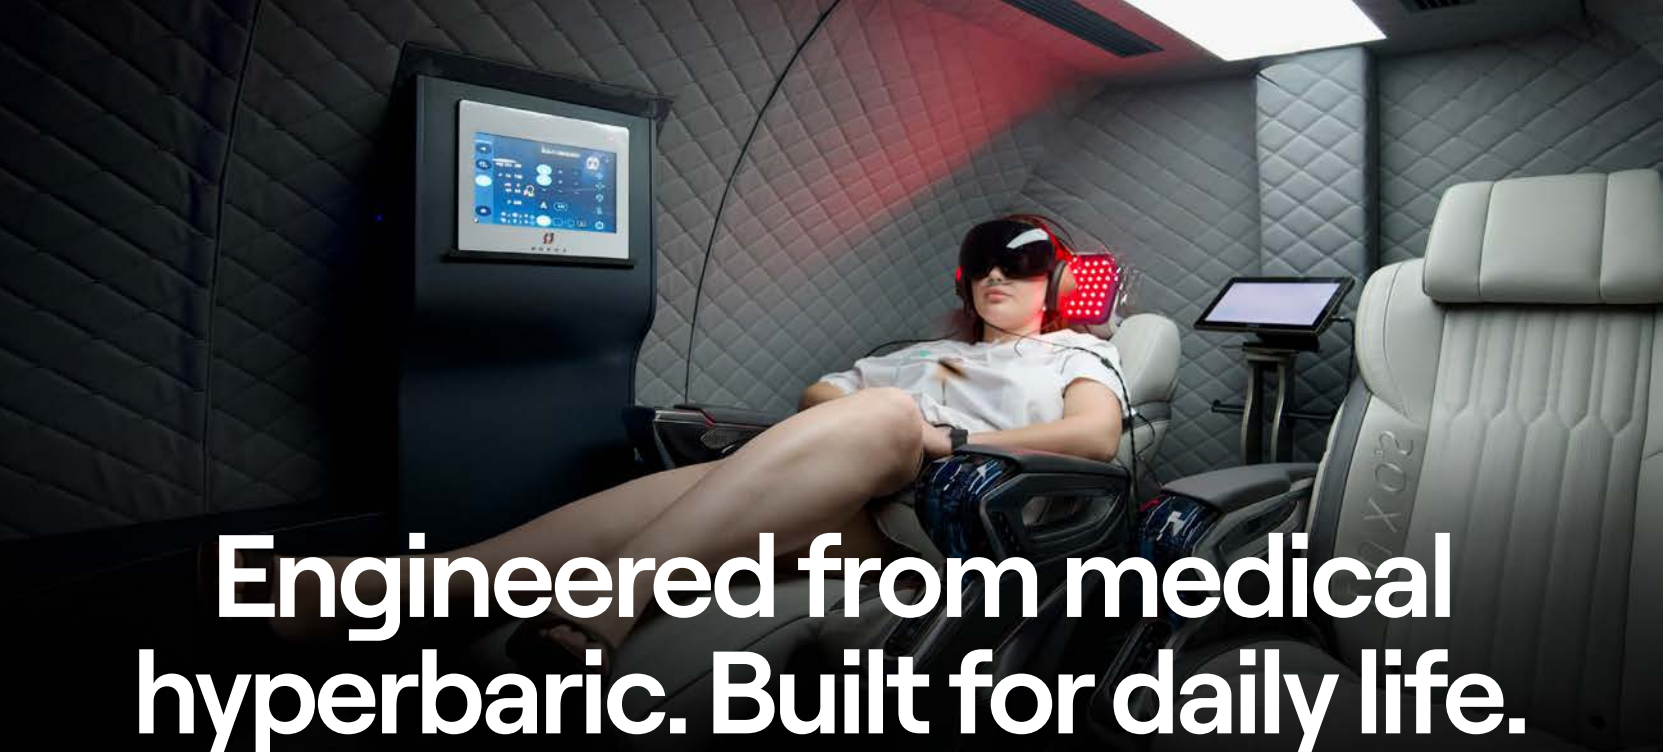

Everything 5LifeTech does, plus the two engines built for the body that trains.

RECOMMENDED FOR **PERFORMANCE**

The Runner The Cyclist The Lifter

Anyone who has to perform

The Teenager in Season

Engineered from medical hyperbaric. Built for daily life.

Engineered by **oxyhelp.**

A chamber is a sealed space you sit in, sometimes daily. What you breathe inside it is the first thing that should be engineered. Here is how OxyHelp handles it, and why most of the category does not.

MOST CHAMBERS

CO₂ recirculated

Most residential masks are pseudo-BIBS: constant-flow masks with no demand valve and no proper washout. The exhaled CO₂ is returned to the chamber and breathed by everyone inside.

oxyhelp.

Fresh air, the whole session

Oxygen comes through an open nasal interface, and the chamber pulls your exhaled CO₂ out continuously, at the highest fresh-air rate in its class. You never breathe the same air twice.

Five modalities, layered on top of the chamber's core hyperbaric oxygen environment. Far-infrared, PEMF, and brainwave entrainment are selectable as protocols on the same touchscreen. Hypoxic priming and transcranial photobiomodulation run on their own dedicated controls.

Hypoxic priming — At the start of the session, a short interval of reduced-oxygen breathing primes the body — signaling it to prepare for and draw more from the oxygen that follows.

Brainwave entrainment — Guided light and sound that steer the nervous system toward focus, calm, or sleep, depending on the protocol.

5Lifetech C4 / C5

Transcranial photobiomodulation — Near-infrared light delivered to the head in short 15–20 minute doses, targeting the brain's mitochondrial energy machinery. The skull and scalp absorb the large majority of incident light before it reaches the brain, so the helmet uses high-output emitters — roughly five times the output of a conventional LED helmet — engineered to drive a meaningful transcranial dose through to the target.

Far-infrared — Gentle radiant warmth that drives circulation and relaxation from the inside out, loosening tissue and supporting recovery.

PEMF — Low-frequency electromagnetic pulses supporting circulation and cellular recovery at the tissue level.

Tailored to your space

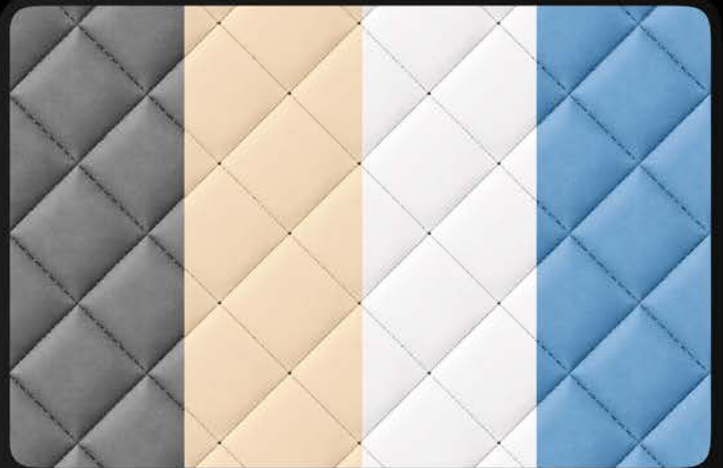

The bespoke service is part of the chamber, not added to the price. The assessment, the samples, the render you sign off, all included before anything is built.

Location Assessment

INCLUDED

We assess your location on a floor plan to confirm transport, access, setup and MEP requirements ahead of installation.

Physical Samples

INCLUDED

You hold the actual materials and finishes in hand and choose from real samples, not from a screen. You approve it, only then do we build.

Computer-Generated Imagery 2D or 3D

INCLUDED

2D drawing or 3D render places your exact chamber inside your actual room and all the technicalities are laid out to your team.

Tailored to your taste

Every surface is yours to specify. The exterior, the paint, the interior down to the seat, all part of the same bespoke build.

Exterior & Paint

INCLUDED

Specify the outer shell and the paint finish, so the chamber belongs to the room it will live in.

Interior, Furniture & Seats

INCLUDED

Choose the interior furniture, the seats and the details, fitted to how you will actually use the chamber.

Included with every chamber

✓ Location assessment

✓ Physical material samples

✓ Exterior & paint specification

✓ Interior, furniture & seats

✓ CGI render in your own room

✓ Build & install to specification

Nothing here is an add-on. It is all part of the chamber, not the invoice.
